PROFILE

Junior Software Developer with hands-on project experience building web applications using JavaScript, Java, Spring Boot, and MySQL. Skilled in responsive interfaces, REST APIs, authentication and authorization, database-driven applications, and backend workflows. Focused on building practical software solutions and strengthening software engineering skills.

PROJECTS

StevCode Connect — Community Help Platform
Java · Spring Boot · Spring Security · JWT · JPA/Hibernate · MySQL

- Developing a community-help platform designed to connect people who need assistance with people willing to help.
- Implemented JWT-based authentication and authorization using Spring Security.
- Designed relational entities and database workflows using JPA/Hibernate and MySQL.

Stevico Construction & Real Estate Website
HTML · CSS · JavaScript · Responsive Web Design

- Designed and developed a responsive business website for a construction and real estate professional.
- Created service and project sections to communicate business services and showcase completed work.
- Implemented an image slider and direct WhatsApp communication for potential clients.

NovaTech E-commerce Store
HTML · CSS · JavaScript
Live Demo | GitHub

- Developed a responsive e-commerce website using vanilla JavaScript.
- Implemented dynamic product rendering, search, and filtering functionality.
- Used browser local storage for persistent client-side application data.
- Applied DOM manipulation, event handling, and responsive design principles.

StevCode University Student Dashboard
HTML · CSS · JavaScript · Local Storage
Live Demo | GitHub

- Built a multi-page student dashboard with login and authenticated user experiences.
- Implemented client-side login-state management using local storage.
- Dynamically rendered student information and dashboard content using JavaScript.

EDUCATION
